

Automotive Headlamp Adhesive application

Description

The Aerogen 'FT Compact with Flow Meters' is the ideal system for integrating into the adhesive process for automotive headlamps. The adhesion enhancement that the flame treatment offers to the unit (typically PP) allows for a very durable bond to be achieved when the lens is adhered. Adhesion enhancement eliminates product failure under the extreme conditions that the lamp will have to operate within throughout its life span.

Nozzle Burner
Fine Flame Profile

Suitable for grooves and recesses

Benefits

- Enhanced Adhesion
- Durable Bond Strength
- Less Unit Failures
- Automatic Application
