

FC Series Fire-Cone Air Heaters

Description

The AEROGEN FC Air Heater Series of burners are ideal for industrial heating applications. They can be ideally utilised in a variety of processes for both direct and indirect air heating. Processes include Ink drying for Flexographic and Rotogravure presses, Paint drying for spray coating booths, Factory / Space heating and also general drying and heating applications. The FC burners have an excellent temperature control ability ($\pm 1^{\circ}\text{C}$ if required) and also a large turn down rate of 35:1.

Features:-

High turn down ratio – 35:1

Temperature modulating
($\pm 1^{\circ}\text{C}$ if required)

In duct design

Automatic flame detection

Works with a variety of gases.

Suitable for operation in high velocity
air stream

Manufacture to international
standards

The Aerogen FC Series Air Heaters come in a variety of sizes dependant on the thermal output required.
