

## Film Treater Station – High Speed Coating

The 'film treater station' is designed for use on film prior to printing or coating, post-treating the surface of the substrate enhancing adhesion, and allowing for water borne coatings to be applied with durable results. The particular flame system can be designed to run one or two burners depending on the top production speed of the line.

### Features

- Unique Post-Treating Burner
- Oxygen Analyzer
- Automated Capacity
- PLC and HMI Panel
- Full Safety Interlocks
- Fully Integrated
- Gas Flow Meters

Due to the thin nature of the substrate the burner station requires for a backing roller for dissipation of the heat through the substrate.
